1 Executive Summary & Context

Objective

This PRD defines what the **Samaj Mobile Application** must do and why. It turns the Samaj SOP (v1.1, 09/10/26) into product requirements for two surfaces: a **member mobile app** for iOS and Android, and a **browser-based Admin Dashboard** for Super Admins and City Admins. The scope is member onboarding and verification, private matrimony with consent-based biodata exchange, scheduled news and ads, the daily Panchang, the member directory, and bulk management of community data.

This document describes product outcomes and scope. Technical architecture and technology choices are covered separately in the engineering design documents.

Problem Statement

> **USER PAIN POINT**
>
> Community information is spread across offline registers, printed Panchang calendars, messaging groups and spreadsheets. As a result, members can't reliably find each other or verified matrimony matches, and families share biodata over channels where it is easily forwarded to strangers. City Admins re-key member lists every week by hand, which creates duplicates. When news and Panchang reach members late or not at all, members stop engaging.

The SOP sets hard standards that today's manual process cannot consistently meet: a Panchang ready **before 05:00 AM daily** (§6.4), news push alerts within **30 seconds** of publishing (§9), **zero duplicate members** after bulk import (§9), and biodata that is **never visible to any third party** (§6.2, §8).

Business Goals

< 48 h
Registration → approval
Every new member verified by a City Admin within 2 days

0
Biodata privacy breaches
No third-party exposure of shared biodata, ever

100%
Panchang on time
Published before 05:00 AM every day, API or manual

−80%
Admin data-handling effort
Bulk import with auto-deduplication replaces manual re-keying

Alignment with community and company objectives. These goals map one-to-one to the SOP's four key objectives (§2): streamlined registration and verification, a secure matrimony environment, real-time news and cultural information, and simpler administration through bulk import and export. For Vrattiks Intelligence LLP the product is also a reusable community-platform foundation. Its city-scoped admin model (one City Admin per city) lets one deployment scale to many cities without new engineering for each one.

2 User Personas & Use Cases

Target Audience

The personas come from the three roles in SOP §3, with the Member role split into its two dominant use cases: matrimony seekers and everyday community members. They are illustrative archetypes, not real people.

SA Super Admin

Platform owner · 1 per deployment

Goals: Appoint and oversee City Admins, keep the platform secure, pass monthly log audits and the quarterly security audit.

Frustrations: No single view of activity across cities. Can't prove who changed what.

Context: Desktop, Chrome/Safari, MFA on every login, VPN for production data.

CA City Admin

Primary admin persona · volunteer or staff

Goals: Clear the approval queue daily, keep city data clean, schedule local news and ads, cover the Panchang when the API fails.

Frustrations: Duplicate members after every list import, profile photos that break community guidelines, early-morning Panchang deadlines.

Context: Laptop for the dashboard, a phone for notifications. Moderate technical skill.

MS Matrimony Seeker

Member · 22–35, or a parent acting for them

Goals: Find verified, compatible matches inside the community. Share biodata only with families they choose.

Frustrations: Biodata forwarded to strangers on messaging apps. No way to filter by education, location or family background.

Context: Mid-range Android or iPhone, often on 4G.

CM Community Member

Member · 30–70, often the head of a family

Goals: Check the day's Panchang, read local news, look up other members, add family members.

Frustrations: News arrives late. Hard-to-read small text. Complicated sign-up with passwords.

Context: Android phone, OTP-only login, needs large touch targets and readable type.

User Stories

US-01 As a **new member**, I want **to register with my mobile number and an OTP** so that **I can join without remembering a password**.

Acceptance: Given a phone number not already registered, when I enter the 6-digit OTP within 5 minutes, then my profile is created with status "Pending approval". Given a number that is already registered, the app tells me so and offers login instead. *(FR-01, FR-02, FR-03)*

US-02 As a **City Admin**, I want **a queue of pending registrations for my city with any uploaded ID** so that **I can verify and approve real community members**.

Acceptance: Given pending members in my city, when I click "Approve", then the member becomes Active, receives a push notification within 30 s, and the action is written to the audit log. I can't see pending members from other cities. *(FR-04, FR-05, FR-06, FR-28, FR-33)*

US-03 As a **member**, I want **to request that family members be added to my household** so that **the directory reflects my whole family**.

Acceptance: Given an active account, when I submit a family-addition request, then it appears in my City Admin's queue. Once approved, the family member shows under my household in the directory. *(FR-07)*

US-04 As a **matrimony seeker**, I want **to create a matrimony profile with photos** so that **suitable families can find me**.

Acceptance: Given an active member, when I submit a matrimony profile, then it stays hidden from search until a City Admin approves the photos against community guidelines. A rejection tells me why. *(FR-08, FR-09)*

US-05 As a **matrimony seeker**, I want **to filter profiles by age, education, location and family background** so that **I only see relevant matches**.

Acceptance: Given approved profiles, when I apply any combination of filters, then only matching profiles appear within 2 s. A profile approved or edited in the last 4 hours appears in results. *(FR-10, FR-11)*

US-06 As **User A**, I want **to send a biodata request from User B's matrimony profile** so that **we can exchange detailed biodata only with consent**.

Acceptance: Given I am viewing User B's public profile, when I tap "Request Biodata", then User B is notified and the request shows as "Pending" on my side. Neither biodata is visible while the request is pending. *(FR-12, FR-16)*

US-07 As **User B**, I want **to accept or decline a biodata request** so that **I control who sees my family's details**.

Acceptance: Given a pending request, when I accept, then User A and I can each view the other's biodata and nobody else can. When I decline, nothing is shared and User A sees "Declined". *(FR-13, FR-14)*

US-08 As a **third party** (any other member or admin), I must **never be able to see biodata shared between User A and User B** so that **their privacy is guaranteed**.

Acceptance: Given an accepted request between A and B, when user C or any admin opens either profile, searches or exports data, then the biodata is never shown and the attempt is logged. *(FR-15, FR-32, FR-33)*

US-09 As a **City Admin**, I want **to schedule news and ad campaigns with start and end dates** so that **content goes live and expires automatically**.

Acceptance: Given an uploaded image (JPG/PNG, ≤ 2 MB, 1080×1920 for full-screen ads), when I set dates and click "Schedule", then the item goes live at the start time, members are notified within 30 s, and it disappears at the end time. *(FR-17, FR-18, FR-19, FR-20)*

US-10 As a **community member**, I want **to see today's Panchang (Tithi, Nakshatra, Yoga) when I open the app** so that **I can plan religious and family activities**.

Acceptance: Given any day, when I open the Panchang screen after 05:00 AM, then the day's Tithi, Nakshatra and Yoga are shown with the date. *(FR-23)*

US-11 As a **City Admin**, I want **to be alerted and to enter the Panchang manually when the astrology API fails** so that **members always have it by 05:00 AM**.

Acceptance: Given the API has not returned data by the alert cut-off (assumed 04:00 AM), when the system raises ERR_API_PN, then the admin gets an alert and can enter the values in a manual form. Manual values replace the API values for that day and are logged. *(FR-24, FR-25)*

US-12 As a **City Admin**, I want **to import weekly member lists from CSV/XLSX with automatic deduplication** so that **the directory stays accurate without manual re-keying**.

Acceptance: Given a file whose headers match the template, when I import it, then valid new rows are created, existing members (matched on phone number) are updated rather than duplicated, and a row-level error report is shown. A header mismatch rejects the whole file before any write. *(FR-30, FR-31)*

US-13 As a **City Admin**, I want **to export a filtered sub-group as a password-protected file** so that **I can organise events without leaking member data**.

Acceptance: Given a filter (e.g. age band, area), when I click "Export Filtered", then I get an encrypted file that only opens with a password I set. The export never includes biodata, and it is logged. *(FR-32, FR-33)*

3 Functional Requirements

Priorities follow MoSCoW for the GA release. "Source" traces each requirement to the SOP section it comes from. "Assumption" marks requirements inferred for completeness that need stakeholder confirmation.

A. Onboarding & Verification

ID	Requirement	Description	Priority	Source
FR-01	**OTP mobile registration & login**	Members register and log in with mobile number + 6-digit SMS OTP on iOS and Android. No passwords.	Must	SOP §3, §9
FR-02	**Personal profile**	Member enters name, city, gender, date of birth, address and family details. Profile status: Pending → Active / Rejected.	Must	SOP §3, §6.1 Step 1

ID	Requirement	Description	Priority	Source
FR-03	**Duplicate phone check**	System blocks registration with a phone number that already exists and points the user to login.	Must	SOP §6.1 Step 2
FR-04	**Identity document upload**	Optional ID upload (JPG/PNG/PDF, ≤ 2 MB) visible only to the member's City Admin and Super Admin.	Should	SOP §6.1 Step 3, §7
FR-05	**Approval queue**	City Admin sees pending registrations for their city only, and can Approve or Reject with a reason.	Must	SOP §3, §6.1 Step 3
FR-06	**Activation notification**	Push notification (with SMS fallback) on approval or rejection.	Should	SOP §6.1 Step 4, §12
FR-07	**Family addition request**	Member requests that relatives be added to their household. City Admin approves before they appear in the directory.	Should	SOP §3

B. Matrimony & Biodata Exchange

ID	Requirement	Description	Priority	Source
FR-08	**Matrimony profile**	Active members (or a family member acting for them) create a matrimony profile. It has a public summary (photo, age, education, city) and a separate private biodata section.	Must	SOP §3, §6.2
FR-09	**Photo moderation**	City Admin approves or rejects profile photos against community guidelines before the profile is searchable.	Must	SOP §6.2
FR-10	**Browse & filter**	Filter by age range, education, location and family background. Results show public summaries only.	Must	SOP §6.2, §9
FR-11	**Search freshness**	New or edited approved profiles appear in search results within 4 hours.	Should	SOP §6.2

ID	Requirement	Description	Priority	Source
FR-12	**Send biodata request**	User A sends a request from User B's profile. One active request per pair. Duplicates are blocked.	Must	SOP §6.2 Step 1
FR-13	**Accept / decline request**	User B sees incoming requests and can Accept or Decline. A declined request can't be resent for 30 days (assumption).	Must	SOP §6.2 Step 2
FR-14	**Mutual biodata access**	Acceptance grants A and B access to each other's biodata. Pending or declined requests grant no access.	Must	SOP §5.2, §6.2 Steps 3–4
FR-15	**Third-party biodata privacy**	Biodata is never returned to any user other than the accepted pair. This applies to search, directory, exports, admin views and API responses. Unauthorised attempts are logged.	Must	SOP §6.2 Privacy Rule, §8, §9
FR-16	**Request inbox & status**	Sent and received tabs with Pending / Accepted / Declined status, plus push notifications on new requests and responses.	Should	SOP §3 (assumption: UX)
FR-39	**Withdraw access**	Either party can revoke an accepted exchange. Access ends immediately for both.	Could	Assumption

C. News, Ads & Notifications

ID	Requirement	Description	Priority	Source
FR-17	**News publishing & scheduling**	"Content Management → Add New": title, body, image, start and end date/time, target city or all cities. "Schedule" queues the item.	Must	SOP §5.3, §6.3
FR-18	**Ad campaigns**	"New Campaign": banner or full-screen creative (1080×1920), start and end dates, auto-expiry.	Should	SOP §3, §6.3
FR-19	**City-scoped content**	City Admins publish to their own city. Super Admin can publish to all cities.	Should	SOP §3
FR-20	**News push alerts**	Push notification sent to the target audience within 30 s of an item going live.	Should	SOP §9, §12
FR-21	**News feed**	Members see live news in reverse-chronological order, with ads placed according to Layout Settings.	Must	SOP §2, §3
FR-22	**Layout settings**	Super Admin can change standard ad dimensions and placements.	Could	SOP §12

D. Panchang & Directory

ID	Requirement	Description	Priority	Source
FR-23	**Daily Panchang**	Daily Tithi, Nakshatra and Yoga fetched from an external astrology API and shown in the app.	Must	SOP §2, §6.4
FR-24	**Manual Panchang override**	Admin form for entering or correcting the day's values. Manual values take precedence, with source and editor recorded.	Must	SOP §6.4, §7 ERR_API_PN
FR-25	**Panchang failure alert**	If no valid data exists by the cut-off (assumed 04:00 AM), the responsible admin gets a push and email alert.	Should	SOP §6.4, §7
FR-26	**Member directory**	Active members can search the directory by name, city and family. Results show approved directory fields only (never biodata).	Must	SOP §2, §3
FR-27	**Directory visibility controls**	Members can hide their phone number and address from the directory.	Could	Assumption (DPDP)

E. Administration, Data & Security

ID	Requirement	Description	Priority	Source
FR-28	**Role-based access**	Three roles: Super Admin, City Admin, Member. Super Admin assigns exactly one City Admin per city. City Admins see only their city's data.	Must	SOP §3, §4
FR-29	**Admin MFA**	MFA required on every Admin Dashboard login. Includes session reset and token re-sync (ERR_AUTH_01).	Must	SOP §4, §7
FR-30	**Bulk import**	Upload CSV/XLSX. Headers are validated strictly against the published template, with a row-level error report.	Must	SOP §5.4, §6.5

ID	Requirement	Description	Priority	Source
FR-31	**Import deduplication**	Existing members are matched on phone number (plus name and date of birth as a secondary check) and updated, not duplicated. Conflicts are flagged for review.	Must	SOP §5.4, §9
FR-32	**Encrypted filtered export**	"Export Filtered" produces a password-encrypted CSV/XLSX. Biodata is always excluded.	Must	SOP §6.5, §8
FR-33	**Admin audit log**	Immutable log of admin actions (approve, reject, edit, import, export, override). Super Admin gets a monthly audit view with filters and CSV download.	Must	SOP §5.5, §8
FR-34	**Data retention**	Profiles inactive for 12 months are archived automatically and purged at 24 months. The member is notified 30 days before archive.	Must	SOP §8
FR-35	**Archive recovery**	"Archive Recovery" restores deleted profiles within 30 days of deletion.	Should	SOP §12
FR-36	**Standard error codes**	Admin-facing errors show the SOP codes (ERR_AUTH_01, ERR_DB_CON, ERR_IMG_UL, ERR_API_PN) with the corrective action.	Should	SOP §7
FR-37	**In-app feedback**	Members submit feedback or report a profile. Submissions appear in the dashboard for daily review.	Could	SOP §5.5
FR-38	**Scheduled import**	Recurring weekly import from a designated upload location.	Could	SOP §5.4

Priority Matrix

Of 39 requirements: 23 Must (59%), 11 Should, 5 Could. Every Must traces to at least one user story above.

Must have

- FR-01–03 OTP registration, profile, duplicate check
- FR-05 Approval queue
- FR-08–10 Matrimony profile, photo moderation, filters
- FR-12–15 Biodata request, accept/decline, mutual access, privacy
- FR-17 News scheduling · FR-21 News feed
- FR-23–24 Panchang + manual override
- FR-26 Directory
- FR-28–34 RBAC, MFA, import, dedup, encrypted export, audit log, retention

Should have

- FR-04 ID upload · FR-06 Activation push
- FR-07 Family additions
- FR-11 4-hour search freshness · FR-16 Request inbox
- FR-18–20 Ads, city scoping, 30 s news push
- FR-25 Panchang alert · FR-35 Archive recovery · FR-36 Error codes

Could have

- FR-39 Withdraw biodata access
- FR-22 Layout settings
- FR-27 Directory visibility controls
- FR-37 In-app feedback · FR-38 Scheduled import

Won't have (this release)

- In-app chat between matched members
- Paid / premium matrimony tiers
- Kundli / horoscope matching
- Member-facing web app

4 Non-Functional Requirements

ID	Category	Requirement	Target / Metric
NFR-01	Performance	App cold start on a mid-range Android device (4 GB RAM) over 4G	≤ 3 s
NFR-02	Performance	API response time for read endpoints / write endpoints	p95 ≤ 500 ms / ≤ 1 s

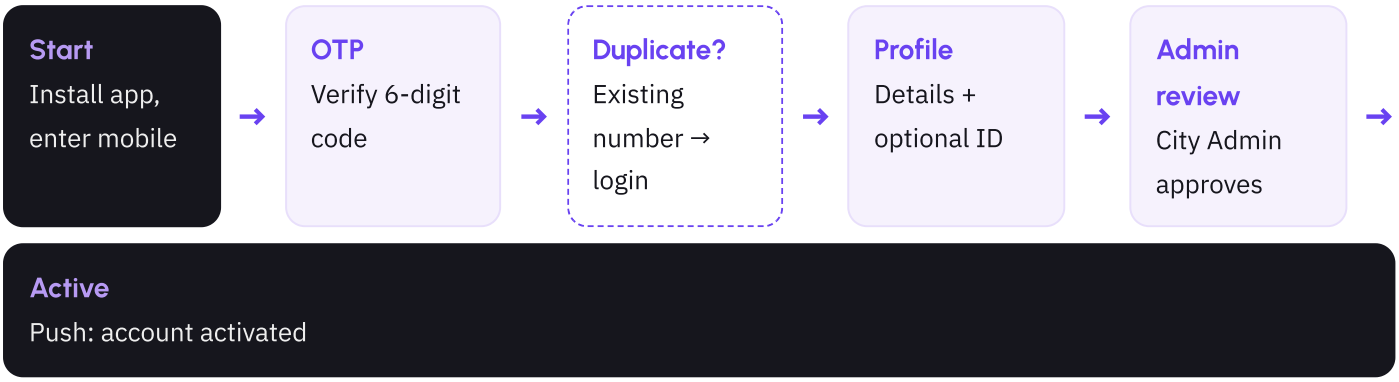

ID	Category	Requirement	Target / Metric
NFR-03	Performance	Matrimony search with up to 4 filters over 50,000 profiles	≤ 2 s end to end
NFR-04	Performance	Concurrent active users without degradation (assumption)	5,000 concurrent; peak 500 req/s
NFR-05	Performance	News push delivery after publish	95% of devices ≤ 30 s
NFR-06	Performance	Bulk import throughput	10,000 rows processed ≤ 2 min with an error report
NFR-07	Security	Encryption in transit for all PII	TLS 1.2+ on every connection; HSTS on the dashboard
NFR-08	Security	Encryption at rest for all PII, ID documents and media	AES-256; biodata fields additionally encrypted at field level
NFR-09	Security	OTP controls	5-minute expiry; max 3 attempts; max 5 OTP sends per number per hour
NFR-10	Security	Admin authentication	MFA on 100% of admin logins; 30-minute idle session timeout
NFR-11	Security	Authorisation enforced server-side on every request (RBAC + city scope + biodata pair check)	0 critical/high findings in the quarterly penetration test
NFR-12	Security	Production database access	Senior technical staff only, over VPN; all access logged
NFR-13	Compliance	India's Digital Personal Data Protection Act 2023: purpose-specific consent at sign-up, user rights to access, correct and erase data, breach notification, grievance contact	Consent captured for 100% of members; erasure requests completed ≤ 30 days
NFR-14	Compliance	Audit log retention and integrity	Append-only; retained ≥ 24 months; reviewed monthly by Super Admin

ID	Category	Requirement	Target / Metric
NFR-15	Compliance	Data retention policy	Archive at 12 months inactive; purge at 24 months; adherence to Samaj bylaws
NFR-16	Usability	Accessibility	WCAG 2.1 AA; dynamic font scaling up to 200%; touch targets ≥ 44×44 pt
NFR-17	Usability	Supported platforms (assumption)	Android 9+ and iOS 15+; small, medium and large screens; dashboard on the latest 2 versions of Chrome and Safari
NFR-18	Usability	Media limits	Images ≤ 2 MB, JPG/PNG; full-screen ads 1080×1920
NFR-19	Reliability	Service availability	99.5% monthly uptime (excluding the announced 02:00 AM window)
NFR-20	Reliability	Backup and recovery	Daily automated backup plus full backup before every release; RPO ≤ 24 h; RTO ≤ 4 h
NFR-21	Reliability	Panchang availability	Valid data published by 05:00 AM IST on 100% of days
NFR-22	Reliability	App stability	Crash-free sessions ≥ 99.5%
NFR-23	Maintainability	Release discipline	48 h code freeze, QA sign-off in staging, CI/CD deployment at 02:00 AM, post-deploy smoke test
NFR-24	Observability	Monitoring and alerting	Real-time alerts for ERR_DB_CON and API error rate > 2%; daily log review

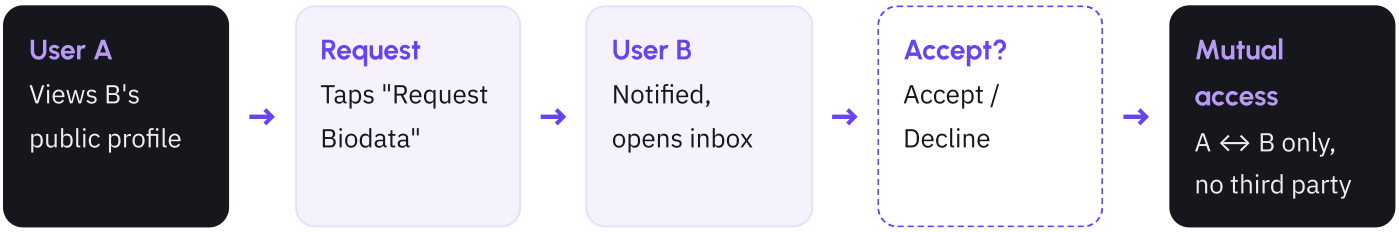

5 User Experience & Design

Flowcharts

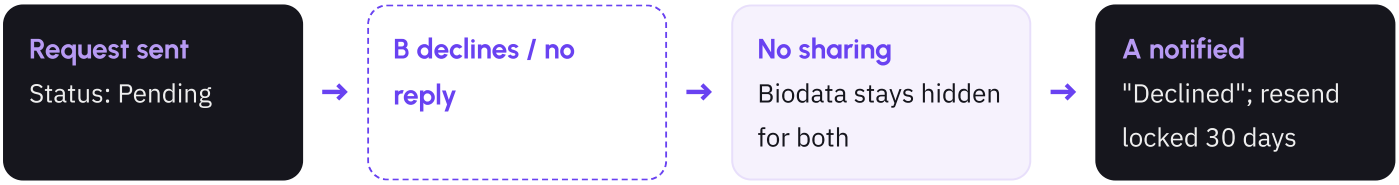

1. Member onboarding (happy path), following SOP §6.1

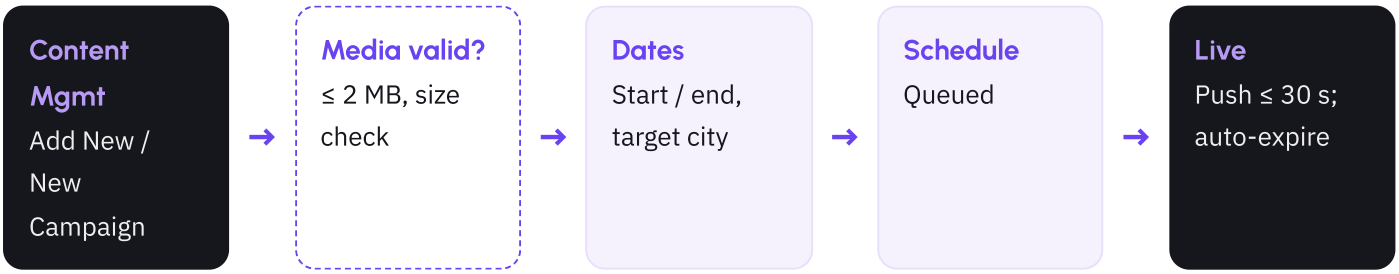

2. Biodata request: accepted, following SOP §6.2 Steps 1–3

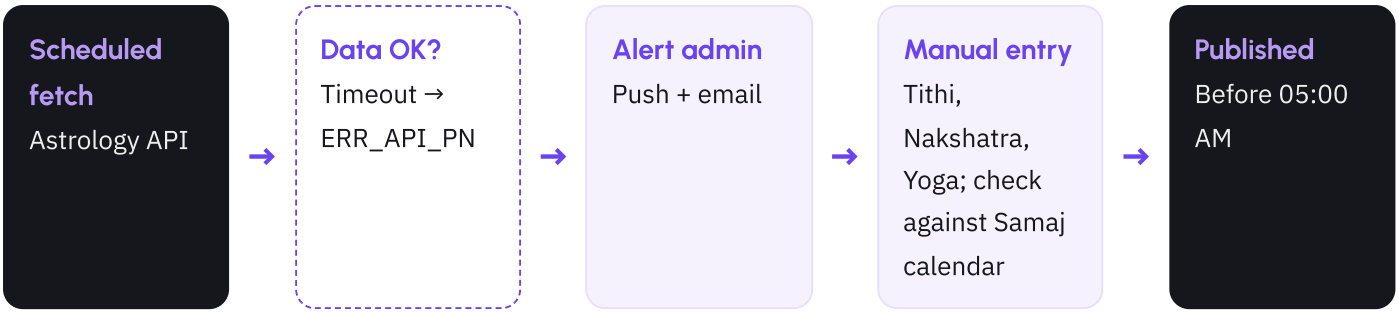

3. Biodata request: declined or pending (exception), following SOP §6.2 Step 4

4. Content scheduling, following SOP §6.3

5. Daily Panchang with API fallback, following SOP §6.4 and ERR_API_PN

6. Weekly member import, following SOP §5.4 and §6.5

Mockups

Surface	Screen	Purpose	Key elements
Mobile	**Login / OTP**	Passwordless entry	Phone input with +91 default, OTP boxes, resend timer, error states
Mobile	**Profile setup**	Capture member details	Step-by-step form, city picker, optional ID upload, DPDP consent checkbox
Mobile	**Home**	Daily hub	Today's Panchang card, latest news, ad slot, quick links to Matrimony and Directory
Mobile	**Matrimony search**	Find matches	Filter sheet (age, education, location, family background), profile cards with public summary only
Mobile	**Matrimony profile**	View a candidate	Photos, summary, "Request Biodata" button with state (Request / Pending / View Biodata)
Mobile	**Biodata requests**	Manage consent	Received / Sent tabs, Accept / Decline actions, status badges
Mobile	**Directory**	Look up members	Search bar, city filter, household view, privacy-respecting contact fields

Surface	Screen	Purpose	Key elements
Mobile	**News & Panchang**	Stay informed	News feed with images, Panchang detail with date switcher
Dashboard	**Approvals**	Verify members, family additions and matrimony photos	Tabbed queues, ID preview, Approve / Reject with reason, bulk approve
Dashboard	**Content Management**	News and ads	Add New / New Campaign, media uploader with size validation, scheduler, calendar view
Dashboard	**Panchang**	API status and manual override	Today's API status, manual entry form, edit history
Dashboard	**Data Import / Export**	Bulk data management	Template download, upload, dedup report, Export Filtered with password prompt
Dashboard	**Admin & Audit** (Super Admin)	Govern the platform	City Admin assignment, audit log viewer, Layout Settings, Archive Recovery

DESIGN LINKS

Mobile app flows: [Figma link — to be added]
Admin Dashboard: [Figma link — to be added]
The design system must support large-text mode and both light and dark themes. Hindi/regional-language support is still an open question (see Appendix).

6 Metrics & Success Criteria

NORTH STAR METRIC

Weekly Active Verified Members: approved members who open the app at least once a week to use Panchang, news, directory or matrimony.

KPI	Definition	Baseline	Target (6 months post-GA)	Measurement	Cadence
Verified members	Members with Active status	TBD — measure in Alpha	70% of the community's known households registered	Product analytics + database count	Monthly
WAU / MAU	Weekly / monthly active verified members	TBD — measure in Beta	WAU/MAU ≥ 45%	Product analytics	Weekly
Approval turnaround	Median time from registration to approve/reject	TBD (manual today)	≤ 48 h median; ≤ 72 h p90	Audit log timestamps	Weekly
Biodata acceptance rate	Accepted ÷ responded requests	TBD — measure in Beta	≥ 35%	Request event data	Monthly
Biodata privacy incidents	Confirmed third-party exposures of biodata	Unknown (offline sharing)	0	Audit log, pen test, user reports	Monthly + quarterly audit
Panchang on-time rate	Days published before 05:00 AM	TBD	100%	Publish timestamp	Daily
Push latency	Publish → device delivery	N/A	95% ≤ 30 s	Push delivery reports	Per release
Import duplicate rate	Duplicate members created per import	TBD (manual today)	0	Dedup report	Weekly
Admin data effort	Admin hours per week on member data	TBD — time study in Alpha	−80%	Admin survey + import logs	Quarterly

KPI	Definition	Baseline	Target (6 months post-GA)	Measurement	Cadence
App quality	Crash-free sessions; store rating	N/A	≥ 99.5%; ≥ 4.3★	Crash reporting; Play Store / App Store	Weekly
Ad fill	Scheduled ad-days ÷ available ad-days	N/A	≥ 60% by month 6	Content Management data	Monthly

7 Release & Phase Plan

Milestones

Timeframes assume one cross-functional squad starting after PRD sign-off. Each release follows SOP §10: 48 h code freeze, staging checklist (§9), full backup, 02:00 AM CI/CD deploy and smoke test.

Alpha — Internal + 1 pilot city

Weeks 1–8

- **Scope:** FR-01–FR-06, FR-21, FR-23–FR-26, FR-28, FR-29, FR-33; NFR-07–NFR-12
- **Users:** Super Admin, 1 City Admin, ~50 invited members
- **Exit criteria:** 50 members onboarded and approved; OTP verified on iOS and Android; Panchang on time 14 days in a row; 0 open P0 bugs

Beta — 2–3 cities

Weeks 9–16

- **Scope:** + FR-07–FR-17, FR-20, FR-30–FR-32
- **Users:** ~1,000 members across pilot cities
- **Exit criteria:** Biodata privacy test suite 100% passing (including third-party and admin access attempts); 0 duplicates in 3 weekly imports; push ≤ 30 s for 95% of devices; crash-free ≥ 99%

General Availability — All cities

Weeks 17–22

- **Scope:** + FR-18, FR-19, FR-34–FR-36; Could-haves as capacity allows
- **Readiness:** External penetration test passed (0 critical/high findings); DPDP consent and grievance flow live; store listings approved
- **Exit criteria:** 99.5% uptime over the first 30 days; crash-free ≥ 99.5%; approval turnaround ≤ 48 h median

Out of Scope

- × **In-app chat or calling between members**: increases moderation and safety burden. Families continue contact offline after a biodata exchange.
- × **Payments, donations or premium matrimony plans**: no monetisation model is defined in the SOP, and payments would add PCI-DSS scope.
- × **Horoscope / Kundli matching**: the SOP covers only the daily Panchang (Tithi, Nakshatra, Yoga).
- × **Member-facing web app**: members use the mobile apps only. The web is limited to the Admin Dashboard.
- × **AI-driven match recommendations**: filter-based search meets the SOP. Revisit after usage data exists.
- × **Events, ticketing or RSVP management**: filtered export supports events offline for now.
- × **Automated ID verification (e.g. Aadhaar/KYC APIs)**: the SOP specifies manual moderator review.

8 Appendix

Assumptions & Open Questions

ASSUMPTIONS (TO BE VALIDATED)

A1. Launch scale is about 10,000 members across about 10 cities, growing to 50,000 within 2 years.
A2. The "Moderator" (§5, §6.1) and "Content Admin" (§5, §6.3, §6.4) duties belong to the **City Admin** role, since SOP §3 defines only three roles.
A3. "Third party" in the biodata privacy rule includes City Admins and the Super Admin. Admins moderate photos and public summaries only and cannot view biodata.
A4. Phone number is the unique member identifier for deduplication.
A5. The Panchang API alert cut-off is 04:00 AM IST, leaving one hour for manual entry.
A6. The Admin Dashboard is a web application used in desktop browsers.

OPEN QUESTIONS

Q1. Are Moderator and Content Admin separate roles, or City Admin duties (A2)?
Q2. Can an admin ever view biodata, e.g. to investigate abuse (A3)? Can an accepted exchange be withdrawn (FR-39)?
Q3. Should City Admins also be able to approve members and moderate content from the mobile app, or only from the web Admin Dashboard?
Q4. Which astrology API provider will be used, and under what licence and cost? Which region's Panchang (sunrise location)?
Q5. Which languages are required at launch (English, Hindi, Gujarati, others)?
Q6. Cloud host: the SOP mentions both AWS and Azure (§7). Which one, and which India region for data residency?
Q7. Where do the weekly member lists come from, and who owns the import template?
Q8. Which directory fields are visible to all members by default?
Q9. Should there be a daily cap on biodata requests per user to prevent spam?
Q10. What baseline numbers (current members, households, admin hours) can the community provide?

Risks & Mitigations

Risk	Impact	Likelihood	Mitigation
Biodata leaks to a third party through an API, export or admin view	High	Low	Server-side pair check on every biodata read; field-level encryption; dedicated privacy test suite as a release gate; access logging
Astrology API outage near 05:00 AM	Medium	Medium	04:00 AM alert, manual override (FR-24), pre-fetch the next day's data the evening before
Approval backlog because City Admins are volunteers	Medium	High	Queue ageing alerts, bulk approve, Super Admin escalation after 72 h
Fake or impersonated matrimony profiles	High	Medium	Matrimony only for verified members; photo moderation; report-profile option (FR-37)
Poor-quality import files create bad data	Medium	High	Strict header validation, dry-run preview, row-level error report, conflicts flagged for review
Non-compliance with the DPDP Act	High	Low	Consent at sign-up, rights requests in-app, retention automation, legal review before GA
Low adoption among older members	Medium	Medium	OTP-only login, large-text mode, regional languages (pending Q5), onboarding help at community events
SMS OTP cost and delivery failures	Medium	Medium	Rate limits (NFR-09), DLT-registered templates, backup SMS provider

Dependencies & Constraints

Type	Item	Notes
External service	Astrology / Panchang API	Provider to be confirmed (Q4)
External service	SMS OTP gateway	India DLT registration required for templates
External service	Firebase Cloud Messaging (+ APNs for iOS)	Push notifications (SOP §12)
External service	Object storage (S3 or equivalent)	Images and ID documents (SOP §7 ERR_IMG_UL)
Infrastructure	Cloud host, VPN, CI/CD, monitoring	AWS vs Azure to be confirmed (Q6); monitoring config per the SOP's Monitoring Config Document
Distribution	Google Play & Apple App Store accounts	Needed by Beta for TestFlight / internal testing tracks
Governance	Samaj community bylaws & photo guidelines	Must be provided as written policy for moderation
